Corporate Systems

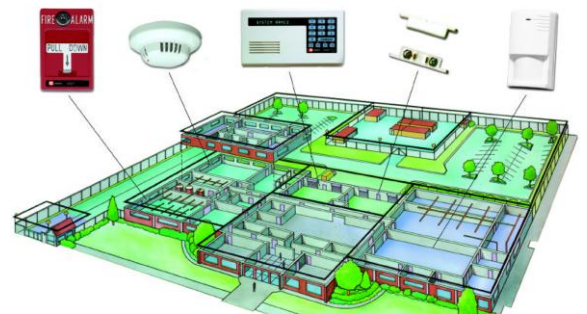

Fire Alarm Systems

- System Design
- Fire Marshal Submissions
- Installation
- 24-Hour Service
- Inspections and Cleanings
- Staff throughout the NY Metro Area
- Best equipment for the application; not limited to any one manufacturer

Bri-Tech handles the complete fire alarm project from design to the fire marshal approvals, to installation, service and testing. Our staff of trained and certified technicians provides 24-hour support for thousands of life safety systems installed by Bri-Tech over the past decade.

The fire alarm controls provide thousands of annunciated points of detection. The points may be used for supervision of automatic sprinkler systems, other fixed extinguishing systems which may be integrated with industrial processes, burglar alarms and access control. The systems can be used to monitor critical building conditions such as boiler safety shutdown, basement flooding, sump pump failure and other serious problems.

Our fire alarm controls give systems that fulfill the strict requirements of NFPA 72, local, remote, central station and auxiliary, all in the same control panel. They offer flexible, addressable controls that can accommodate many different types of sensors.

System design is by our in-house Engineering Department
