

# Symbiant Water Flow Monitoring System

## Some things in your home can be replaced, but many cannot... protect them all with Bri-Tech's Water Flow Monitoring System

Water damage due to plumbing failures and freezing pipes is the second most frequently filed homeowners insurance claim\*\*. To make matters worse, the high humidity conditions that exist after a water loss create the perfect environment for mold growth, a major source of indoor air problems.

Bri-Tech's Water Flow Monitoring System is an automatic water shutoff system designed to minimize or prevent damage caused by leaks in water supply lines, leaks from frozen pipes, ruptured washing machine hoses and failures in plumbing system components. Unlike other systems, Bri-Tech's System protects the entire home from a single installation point – to help identify and stop leaks before a small mess becomes a huge problem. As an added advantage, homeowners who install Bri-Tech's System may qualify for a discount on their insurance premiums.

### Flexible.

Bri-Tech's Water Flow Monitoring System utilizes a sophisticated flow sensor coupled with an intuitive user interface to control a motor-driven ball valve. The valve and flow sensor assembly can be installed in any orientation in both indoor and outdoor environments. The Water Flow Monitoring System can also be connected to any home security system, alerting the monitoring service when a leak is detected.

### Reliable.

The Water Flow Monitoring System continuously monitors all water coming into the home and detects any unusual flow, 24 hours a day, 7 days a week. If water flow exceeds a preset limit, the Water Flow Monitoring System automatically turns off the water and sounds an alarm at the keypad. The System does all of this from a single point in the water main, serving as a first line of defense against water damage.

### Customizable.

When the residence is occupied (Home mode), the Water Flow Monitoring System is preprogrammed to allow 30 minutes of uninterrupted water flow before the shutoff valve is activated. When the residence is unoccupied (Away mode), the System allows 30 seconds of uninterrupted water flow. Settings for both modes can be easily changed to correspond with the homeowner's personal water use patterns.

### Taking the Next Step

The risk of water damage is clear, but so is the solution. Give yourself peace of mind by protecting your home with Bri-Tech's Water Flow Monitoring System.

## SYM-WMS | Water Breaker

### Automatic Water Flow Monitoring and Shutoff System

The circuit breaker for your home plumbing system

Even a minor leak can cause significant water damage. Bri-Tech's water Flow Monitoring System protects your home from costly water damage.

#### Standard System Features:

- Full-port, low-lead, bronze ball valve construction
- Valve: 12 5/8" L x 5" D x 10 3/4" H; 10.25 lbs.
- Can be installed both indoor and outdoor in any orientation
- Integrated manual override
- Valve equipped with 1" FIP fittings, can be easily adapted to 1/2" or 3/4"
- **New - larger system for Estate Homes with 2" and above water mains**
- Compatible with all domestic water pipe systems
- Flow sensor detects water flow less than 2 oz per minute
- Control panel has alphanumeric LCD display and soft-touch silicone keypad
- Five-year warranty on primary flow path components and one-year warranty on electronics
