

Model | **GS1**  
Golf Simulator

### General Specifications

After researching many simulator manufacturers, our team has chosen Visual Sports as the core product for our simulator systems. These systems include all the components and technology needed to create a virtual environment for gaming right in your home. Remember the Holodeck from Star Trek? Our gaming simulators are a big step in that direction with a screen that takes up an entire wall. While the Golf Simulator is top rated and the primary simulator, there is much more these systems can do. The most impressive being that you can use the game simulator to enjoy your favorite console systems including the XBOX, Play Station and especially the Wii to have a totally engulfing experience.

### Software and Technology

While built with the best components available the system's true power comes from Visual Sports Systems (VSS). Using their patented Micro Sight camera systems VS Cameras. With Over a decade of experience in the professional simulator market VSS took this cutting edge technology and made it affordable for use in homes. Bri-Tech's team designed the enclosures, sound and projection systems, and video gaming interface as well as formal installation methods to make this the ideal sim for your home.

### Key Features

- Records your drive speed, trajectory and distance
- Industry Leading Ball Flight Tracking picks up slices and hooks
- Choice of photo or 3D rendered Golf
