

DIGITAL SURVEILLANCE

netray™ | Home Digital Surveillance and Monitoring System for Fine Homes

We live in an era where surveillance equipment has entered the mainstream as a necessary tool to ensure the safety and peace of mind of homeowners.

Our quickly-evolving dependency on such protection, particularly on video surveillance, has resulted in sometimes slipshod designs consisting of makeshift PC's linked to poor resolution cameras which may not fully scan and cover a required field. Raw systems such as these create a false sense of security and increase the likelihood of breakdown or disruption. Often, their inadequacy is discovered after the fact.

Where optimal performance and high standards of installation are required, **netray** offers a timely alternative to those risky, hobbled-together and unreliable 'systems'. Our forward-looking and professionally engineered designs can monitor any location in the world in real-time. Digitally recorded images can be sent via e-mail and viewed as stills or short videos.

Installed by Bri-Tech, a top-ranked provider of advanced security and communications systems for over 12 years, our engineers can design a **netray** Digital Surveillance System for your home, which will meet your every need. Call us for a consultation.
