It's Time for a Security Upgrade.

You've changed the copier, computer system and phone systems to take advantage of the latest technology. Why leave the security system out? Our new keypad has programmable buttons making it easy to use. These new systems are network compatible, making it easy for you to view, use logs and remotely monitor your system. Left work and not sure if you set the alarm? Log in from home and check. Alarm goes off in the middle of the night? Check your cameras before leaving; restore and reset from home.

Are your security personnel running to multiple buildings? Give them the digital view and control they need to protect your company, its employees and clients. Bri-Tech is the leader in intergrated electronic systems that save energy, are easier to use and provide better information to owners.
Be Progressive

Eye in the Sky

New exterior cameras see more, adjust for night vision and can even track movement

Protect one building, an entire campus, or a nationwide enterprise.

Card Access and Employee Badging Systems

Self checking security virtually eliminates "False Alarms"

Complete Entry Solutions
Lobby Touch Screen Directories and Visitor Badging Systems

Automatic Gates

Organized Controls - Our engineered solutions are network ready and are built around the best of breed hardware.

Monitor and control your building by computer or optional intuitive touchscreen.

Fire Alarm • **Video Surveillance** • **Engineering** • **Service**

As a provider of integrated security solutions for some of Long Island's most recognizable corporations and institutions, we have the experience to develop systems for even the most complex projects. Consider having our system designers evaluate your facilities.

Camera Systems viewable from anywhere

The Sum is Greater than the Parts when Systems Communicate.

1. On intrusion, alarm camera systems switch to real-time high resolution.

2. Find with just a few clicks who was in the area - camera views with integrated access control and camera logs.

3. E-mail video files to managers showing potential risks.

4. Have one security officer watch and control multiple locations in real time, opening doors and arming systems.

5. Provide integrated audit trails of building activities with camera, alarm status access control and critical systems monitoring on one screen.

6. Integrate with energy management for optimal savings. Your security system can turn off lighting and set back thermostats automatically.

Establish a Security Post

A central security post is always preferred; it not only allows for accurate ID, it provides an "always there" resource for medical and other emergencies. Depending on your security needs additional responsibilities can be given to this post like monitoring emergency generators and other sub-systems, all through Bri-Tech digital monitoring systems. When integrated with lighting and HVAC systems, your security post becomes an energy management team. Speak to one of our integration specialists to learn more.
