

Enhanced Series Bathroom TV Mirror

A television with its black plastic frame never looks elegant in a fine space. Television Mirrors seamlessly incorporate beauty and technology. TV Mirrors are not new, however previous attempts killed the picture quality and brightness. The new generation uses special “developed for purpose” glass mated with a high performance television, making this concept elegant and impressive. **When the TV is off, it is not visible; all you see is your reflection.** Never again look at a plain TV hanging on the wall of your beautiful home or office!

There is a large selection of products to choose from to fit your style. There are standard, quick-ship units available. Custom options can be specified for glass type, size, backlighting, frosting, and frame type, including floating and frameless. CAD drawings will be prepared by our staff for your approval.

Call for pricing and design assistance, or visit our showroom.
